EDUCATION

University of Georgia: Athens, GA — Aug 2024 – Dec 2027
Bachelor of Science, Electrical Engineering — GPA: 3.29
Honors: President's List, Tau Beta Pi (Engineering Honor Society)

RELEVANT PROFESSIONAL EXPERIENCE

Parallax Defense – Berkeley, CA — June 2026 – Present
Founding Hardware Engineer

- Appointed as Founding Hardware Engineer to define the core electrical architecture and system-level hardware frameworks from ground-level requirements.
- Conducted rigorous trade-space analyses to evaluate advanced sensor payloads (LiDAR, Radar, EO/IR), translating mission criteria into technical standards and comprehensive Concepts of Operations (ConOps) documentation.
- Architected the core electrical system while executing cross-functional integration across mechanical and software disciplines to deliver a unified product architecture.

Textron Specialized Vehicles – Augusta, GA — Jun 2026 – Aug 2026
Compliance Engineer (RF) Intern

- Compiled and applied global EMC/EMI compliance standards including FCC/ANSI (US), EMC Directive 2014/30/EU and RED 2014/53/EU (EU), and RSS/ISED (Canada) to define emissions, immunity, and radio test requirements for EV systems.
- Executed wire harness design, troubleshooting, and hardware validation to ensure signal and power integrity.
- Coordinated with electrical engineering teams to execute unintentional radiator verification testing, mitigating electromagnetic interference (EMI) risks prior to vehicle production.

UGA Small Satellite Research Lab - Athens, GA — Sept 2024 – Present
Learn-Sat Chief Engineer

- Owned the technical mission baseline and authored cross-subsystem Interface Control Documents across avionics, payload, power, comms, structures, and software to define system requirements and allocate budgets (power/data/thermal/mass).
- Directed a 25+ member multidisciplinary engineering team, maintaining strict design-change traceability across the project lifecycle and leading comprehensive design reviews to mitigate systemic hardware risks and eliminate integration conflicts.

UGA Small Satellite Research Lab - Athens, GA — May 2025 – Aug 2025
Joint Mission Specialist (Paid Summer Internship)

- Selected for a competitive summer role to accelerate hardware development and mission maturation for a 2U CubeSat.
- Engineered 4 mission-critical space-grade PCBs for power delivery, data transmission, and sensor interfacing using Altium Designer, enabling robust performance through vibration, thermal, and launch conditions.
- Enforced strict DRC layout rules, power integrity standards, and strict mass/power budgets to achieve launch certification and mission compliance.
- Resolved integration risks by leading design reviews and executing verification methods; continuity checks, harness validation, thermal monitoring, and "day-in-the-life" simulations, ensuring reliable spacecraft operations in orbit.

CREATE Labs – Athens, GA
Student Engineer — Aug 2025 – Aug 2026

- Delivered scalable, client-facing engineering solutions from requirements through deployment for real-world stakeholders across projects totaling $10,000+ in budgets.
- Owned PCB design from schematic capture through layout, meeting client performance requirements while managing BOM cost, staying within project budgets, and accounting for procurement lead times.
- Integrated SMD RF/wireless antenna modules on PCBs; applied vendor reference layouts, optimized grounding/keep-out regions, and validated link performance through connectivity testing.

RELEVANT PROJECT EXPERIENCE

UGA AIAA Design Build Fly Team, *Electrical Team Lead* — Aug 2024 – Dec 2025

- Led a 4-member Electrical team designing and testing flight-controller power and sensor systems for a glider; created wiring diagrams and PCBs that streamlined assembly and sped up prototyping/debug.
- Performed system-level troubleshooting on avionics wiring and sensor integration, documenting failure modes, corrective actions, and redesign proposals to guide future iterations and onboarding.

TECHNICAL SKILLS

Hardware & EE Tools: PCB Design (Altium, KiCAD, Multisim, LTSpice, PSpice), Oscilloscope, Digital Multimeter, Soldering (Manual & Reflow), Power Systems, Circuit Design, Breadboard Prototyping, Wire Harness Design & Fabrication, EMC/EMI Compliance Testing, Spectrum Analyzer / RF Testing
Programming & Software: Python, C, C++, MATLAB, JavaScript, HTML/CSS, R, LaTeX, Git, VS Code, Inventor, AutoCAD
Embedded & Platforms: Raspberry Pi, Arduino, ESP32, Linux, EFI Shell, NVIDIA Jetson Orin Nano
Systems & Methodology: Systems Engineering, Requirements Management, ICDs, System Integration & Verification (I&V), ConOps, Trade-Space Analysis, Technical Budgeting, Configuration Management, Risk Mitigation, Regulatory Compliance
